PROFILE

I build things on the web — front-end, back-end, whatever the project actually needs. Security isn't something I bolt on at the end; it's part of how I think while I'm writing the code in the first place. What I like most is seeing a project through, start to finish: the interface, the logic behind it, the database, getting it live. Lately I've been splitting my time between that and studying AI and machine learning, mostly because I don't want to be building web apps the same way five years from now.

SKILLS

Languages: JavaScript, Python, PHP, Java, C#

Frameworks & Libraries: React, Angular / Vue.js, Node.js / Express, Django / Flask, .NET

Databases & Tools: MongoDB, Git / GitHub, Docker, Linux / Bash

Other: Secure coding practices, authentication & risk mitigation, IT systems design & documentation

WORK EXPERIENCE

Programmer Technician

Sep 2025 – Aug 2026

M.A.E. SRL, Frosolone, Italy

- Firmware, mostly — getting our acquisition terminals to actually talk to the hardware they're connected to.
- Also on the software side: building out the interface and the tools we use to process and view the data coming in.

Software Analyst

Jan 2024 – Jan 2025

Accenture Technology Solutions S.R.L., Rome, Italy

- Went through most of a web project's lifecycle — analysis, building it, testing it, writing it all down afterward.
- Sat with clients directly to figure out what their systems actually needed to do, not just what the brief said.

Geotechnical & Soil Investigations Technician

Dec 2022 – Jan 2024

GEOTEC S.R.L., Campobasso, Italy

- Preliminary seismic survey work on the DIVE Project — a lot of it out in valleys and dense urban areas, which each brought their own headaches.
- Picked up some geothermal research work on the side too.

Management Assistant

2020 – 2022

AT Mattia Fiore General Service S.R.L., Teramo, Italy

- Kept construction sites staffed — figuring out who needed to be where and when.
- Handled getting equipment moved between sites across Italy, which involved more logistics than people expect.

Sales Supervisor

2013 – 2017

Lonestar Cell MTN GSM Communication Company, Monrovia, Liberia

- Managed sales relationships with everyone from individual customers to municipal accounts.
- Part of the team that opened new sales outlets as the company expanded across the country.

EDUCATION

MSc Artificial Intelligence

Apr 2026 – Apr 2028 (in progress)

MBS School of Business — Online (2-year program)

Post Graduate Program in Artificial Intelligence and Machine Learning: Business Applications

Apr 2026 – Dec 2026 (in progress)
Texas McCombs School of Business, The University of Texas at Austin

Master's in Cyber Security: Operations

2022 – 2023

Academy Rapido, Milan, Italy

- Threat detection, vulnerability analysis, incident response — and honestly, a lot of it was learning how to actually stay calm and respond when something's already gone wrong.

Computer Science and Full Stack Developer

2024 – Sep 2026 (final exam in progress)

ITS DEMOS Academy, Campobasso, Italy

- Covers the whole stack — interfaces, server-side logic, databases, deployment. Basically everything I use day to day now.

BS in Mining Engineering (coursework completed)

2010 – 2015

University of Liberia, Monrovia, Liberia

- Finished all my coursework, but never got to walk at graduation — political unrest and direct threats to my safety meant I had to leave the country before that happened.

LANGUAGES

English — Native

Italian — Basic

INTERESTS

Coding, problem solving, web development.
